

AltaLink – A New Way to Print Color

U of M

Verified Solution 10/11/2017

Description:

Some color images produced on the AltaLink products (C8035, C8055, & C8070) were faded and inconsistent.

Xerox released new firmware (SPAR Release 100.xxx.107.28600) for the AltaLink C80xx models addressing the color image quality. This update, along with a print queue update on your print servers will allow you to print the colors you've grown accustomed to seeing on previous devices.

A new way to select color:

To select color when printing a document:

1. Open the printer properties.
2. Select "Color" from the *Saved Settings* at the bottom of the page.

Selecting color in this manner will apply all of the settings to produce the familiar colors you have experience with previous devices.

If you are not seeing the option "Color" in the dropdown of *Saved Settings* as pictured here, please contact your IT department.
