

Enable Edit Local Address Book via Web

U of M

Verified Solution 10/22/2017

Description:

Users require ability to add contacts to the local address book at the device, using the device's Web Interface. This option can be enabled in the device setting. This will require the user has access in the network to view the devices IP Address using a web browser, to access the device's hosted web page.

AltaLink C80xx:

1. Login as Admin on the Printer's Webpage
2. Click on the 'Address Book Tab'
3. Use the drop down on the top right corner 'Management' and select 'Security: User Permissions'
4. Then Select the permission 'Open to All Users' and Save

Now the Address book will no longer require an Admin to make changes.
